

The ORIGINE B1 anti-vibration mounting from premium quality French Hi-Fi manufacturer Neodio brings the listener even closer to the essence of a recording

Neodio's patented Zero Vibration technology absorbs and dissipates the harmful effects of vibrational interference. The result is a significant increase in the sound quality of any Hi-Fi or Home Cinema system, from the most modest to the most sophisticated. The ORIGINE B1 is the first product to incorporate Neodio's patented Zero Vibration technology.

ZERO VIBRATION, AN INNOVATIVE TECHNOLOGY

The fruit of 14 years of research into High Fidelity anomalies, the ORIGINE B1 is a revolutionary accessory. It acts wherever there are vibrations and electricity. **Operating like a «black hole», it absorbs and dissipates parasitic vibrations.** (A more detailed explanation is available in the press kit.)

EXPERIENCE YOUR HIFI OR HOME CINEMA SYSTEM AS YOU HAVE NEVER HEARD IT BEFORE

ORIGINE B1 provides:

- A «broadband» effect that **enhances timbre over the entire spectrum without a marked tonal signature**
- A more faithful dynamic rendering of the sound, characterized by **better definition of micro-information and an absence of saturation on loud notes**
- A sound image that extends substantially beyond the framework of the speakers, giving **the impression that the musicians are in the room.**

ORIGINE B1 offers:

- The sensation of reconnecting with the essence of a recording
- The pleasure of sound quality that focuses on the music rather than analysis of the sound

A UNIVERSAL SOLUTION

ORIGINE B1 improves sound quality by being placed under or on any component of a Hi-Fi or Home Cinema system: **speakers, CD or Blu-Ray players, amplifiers, and other equipment such as mains powerstrips and computers.** It also improves the video image on Blu-ray players. As such, it is universal and can function in numerous configurations.

The best configuration is to install equipment on three ORIGINE B1 supports. This will ensure that almost all of the parasitic vibrations are absorbed by the supports.

For example, speakers on Origine B1 mountings offer much higher energy and definition, as if their cabinets were heavier and had more damping.

A SCALABLE SOLUTION

Start with three supports, and then progress to a complete treatment under each piece of equipment. You will then be approaching your Hi-Fi system's optimal performance, within the limits of the acoustics of your listening space.

In the case of a limited number of supports, the ORIGINE B1 can also be installed head down on top of equipment in order to dissipate vibrations in the cabinet or chassis from above.

PRODUCT INFORMATION

The ORIGINE B3 has three parts:

- A head with an M6 threaded hole which should be mechanically coupled to the equipment to be treated
- A laser engraved stainless steel body
- An invisible joint which mechanically separates the body from the head.

Retail Price inc. tax:

- € 750 for 3; € 1000 for 4

Dimensions and weight:

- 65 mm wide, 32 mm high
- 370 g

Maximum load:

- 15 kg

On sale in shops specializing in HI-FI / Home Cinema.

All NEODIO products are designed and manufactured in France.
